

HP Diamantbohrer

HP Multilayer Diamonds

Kleedoc Multilayer Diamant-Instrumente werden computergesteuert hergestellt. Das garantiert eine homogene Verteilung der natürlichen Diamantpartikel. Die Instrumente verfügen über mehr Diamantkorn auf verschiedenen Ebenen und in mehreren Lagen, so übernehmen beim Schleifen fortwährend neue Diamantkörner mit scharfen Kanten die Funktion abgenutzter Diamantkörner.

Ein zusätzlicher Verschleiß-Schutz eine erhöhte Langlebigkeit der Kleedoc Diamant-Instrumenten wird durch ein ausgedehntes Elektroplattier-Verfahren erzielt. All dies sorgt für einen optimalen Material-Abtrag beziehungsweise optimale Schneidleistung und für eine feine Oberflächengüte bei einer hohen Standzeit.

Diamantiert wird ein rostfreier, einteiliger und genau zentrierter Rohling. Dies sorgt für ein vibrationsfreies Schleifen.

Kleedoc Diamant-Instrumente sind in 120 Formen erhältlich und eignen sich für Kronen-, Kavitäten- und Brückenpreparationen aus ZrO₂, Keramik, Verblendkunst- und Modellwerkstoffen.

Neben der Standardkörnung „mittel“ (105-120 µm) gibt es eine Auswahl mit feinem Korn (46 µm) und grobem Korn (150/180 µm). Auf Anfrage sind die Instrumente in weiteren anderen Kornabstufungen, Formen, sowie mit synthetischem Diamantkorn erhältlich.

Kleedoc multilayer diamonds instruments are computer-controlled manufactured. This guarantees a homogeneous spreading of the natural diamond particles. The instruments have more diamond on different levels and in various layers. New diamond grits with sharp edges will, therefore, take the place of broken off grains or grains separated from the plating during normal use.

An additional wear out protection -a increased longevity- of Kleedoc diamond instruments is obtained by an expanded electrical plating process.

All this provides an optimal material removal and/or an optimal cut achievement and a fine surface quality with a high service life.

The diamond plating is on a stainless steel, one-piece and exactly centered blank. This provides a vibration-free cutting.

Kleedoc diamond instruments are available in 120 shapes and are suitable for crown, cavity and bridge preparations of ZrO₂, ceramic(s), composites and model materials.

Besides of the standard grain size „medium“ (105-120 µm) a selection with fine grain (46 µm) and coarse grain (150/180 µm) is available. On request the instruments are also available in more shapes, grain sizes as well as with synthetic diamond grain.
