## New parameter for assessing MORSA waxes

Due to the ever increasing demands on dental waxes, in this new MORSA catalogue we have given our range of waxes additional technical parameter, e.g. average setting point, melting point, dropping point, ash content, penetration. In particular the ash content of the wax gives the user important information on whether the wax has the ability to combust without leaving a residue.

The lower the penetration value, the harder the wax.

# 1. Full and partial denture prosthetics

## 1.1 Pink Sheet Waxes

All sheet waxes are fully combustible: Ash content: 0.000-0.004

### 1.1.1 Sheet wax Special

- the top-selling MORSA sheet wax
- made from the best raw materials – very high bees' wax content
- two different seasonal qualities for summer and winter

# 1. Full and partial denture prosthetics

## 1.2.3 Occlusal rims, preformed (horse shoe shaped)

- for the production of full occlusal rims
- preformed dental arches
- no more time consuming re-shaping of preformed parts required
- Optimal fit on the alveolar ridge due to basal groove
- the slanted ends prevent precontact and therefore the urge to gag
- quickly adaptable to every oral situation
- quick and easy to re-shape when in a warmed state
- form stability after cooling guarantees accurate bite registration
- simplified visual control due to opaque colours
- available in three hardnesses and three colours:
- soft = yellow penetration: 30
- medium hardness = rose penetration: 25
- hard = pink penetration: 23
- available in two sizes each with 100 pcs.
- small rim = Standard: height 10 mm, length 43 mm, width 48 mm
- large rim = Standard: height 12 mm, length 50 mm, width 53 mm
